ABSTRACT

A method to identify victim of abuse and remote operator using voice to skull and remote neural monitoring, comprising the steps of: using a database in a computer consisting of one or more of disgusting items, funny items, anti-political trend and anti-religious belief items, countries and races items, foreign clubs or organizations items, languages and dialects items, and scientific knowledge items, tested person selecting one item which only causes the remote operator to have psychological response and does not cause the tested person to have psychological response, instructing the tested person to launch imaginary psychological attack, assigning test questions based on the imaginary psychological attack and obtaining answers from the tested person in response to the test questions, then using polygraph meter to analysis the answers and assigning true or false status to the answers.

**CROSS REFERENCE OF RELATED
APPLICATION**

[0001] This application claims the benefit of U.S. Provisional Patent Application No. 62/812,915, filed Mar. 1, 2019. This application is incorporated by reference herein in their entirety.

**BACKGROUND OF THE PRESENT
INVENTION**

Field of Invention

[0002] The present invention relates to a method to identify who is victims of abuse voice to skull and remote neural monitoring technology to and identify who is remote attacker or operator using device of voice to skull and remote neural monitoring.

Description of Related Arts

[0003] Origin of the problem: from 2015 to 2018, there were large amount of victims in 22 provinces in China, Shanghai and Beijing municipalities have large number of collective protests against RNM & V2K technology abuse.

[0004] In addition, on Oct. 1, 2015, representatives from 17 countries in Berlin, Germany, hold a "Covered Harassment Conference". The covered harassment is same thing with voice to skull & remote neural monitoring technology.

[0005] After a lot of times contacting with the victims in China mainland WeChat, emails and telephones, these victims' thoughts were read and harassed at same time by some unknown Chinese institutions abusing these technology.

[0006] According to Zhong Zhiyong, the organizer and leader of anti-V2k & RNM torture in 22 provinces and cities in mainland China (Zhong Zhiyong's affairs were also reported by the media "The Epoch Times" and he and other victims representatives also received interview with "New Tang Dynasty TV"). He told me directly by phone and WeChart almost all victims have the same experience: quickly being read thoughts and could use their thoughts to hold silent thoughts conversations with operators (ROD) using devices of V2K & RNM. Including a Chinese victim has been a lawful permanent resident in United States is still quickly being read thoughts and could use his thoughts to hold silent thoughts conversations with operators (ROD) using devices of V2K & RNM. But all these RODs are in P.R.China.

[0007] Another Chinese leader anti-abuse technology of V2K & RNM, Mr. Yao Dou-jie live in Shenzhen China who collect large information also confirmed same cases above.

[0008] Generally three to five operators (ROD) of V2k & RNM devices in group in turn concentrate one victim via satellite positioning technology to realize remote harassment, the technology is mainly based on these US technology patents and China patents which describe the technology of V2K & RNM are extracting the brain's characteristic

wave frequency first (like fingerprints, each person's brain characteristic wave frequency is different), then codes the brain characteristic wave frequency by computer software technology and remotely locks the frequency and monitors the victim's brain wave frequency using computer software technology and satellite positioning technology.

[0009] The bases of these technology are microwave auditory effect or call Frey effect and neural coding technology.

[0010] In such way, three to five operators (ROD) using devices of V2K & RNM in groups perform active psychological attacks on victim's brain with some negative emotions, but the effect of this kind of psychological reactions can be two-ways or two directions between victim and operators (RODs) using devices of V2K & RNM.

[0011] In past of years, FBI's investigation on some cases related similar technology attacking.

[0012] This is not a scientific fiction, because the following US patents and China patents tell us it is true and existing technologies:

[0013] 1. U.S. Pat. No. 6,470,214B1 Method and device for implementing the radio frequency hearing effect, US Air Force.

[0014] 2. The US public technology patent for remote reading human thoughts is U.S. Pat. No. 3,951,134A: Apparatus and method for remotely monitoring and altering brain waves.

[0015] 3. U.S. Pat. No. 6,011,991A explained how read human thoughts remotely via satellite.

[0016] 4. CN 2008202247769.1 China use the tech both in peaceful time and war time.

[0017] Till now we have confirmed these technologies existing with US patents and China patents.

[0018] 5. US company QU-wave.com also explains what is V2K.

[0019] Till now, there is not any method to identify both the victims and those remote operators (RODs) using devices of V2K & RNM around world. These abuse has been developed global and transnational, so the invention is the first set of method in the world which can identify both victims and remote operators (RODs) using devices of V2K & RNM accurately in high degree by means of computer technology.

SUMMARY OF THE PRESENT INVENTION

[0020] An object of the present invention is to provide a methods to identify both the victims and those remote operators using devices of V2K & RNM around world. This is the first set invention of identification with computer and automatic technology around world which can automatically generate identification results, except checking polygraph meter with human, all other parts of the system achieves automation.

[0021] The method of the present invention:

[0022] Abbreviation:

[0023] ROD: remote operators using devices of V2K & RNM technology

[0024] ISA:an identification system administrator

[0025] TP: a tested person who originally claims him/her as a victim

[0026] Step 1. Ask a TP who was a victim to use of RODs reading his/her thoughts to launch multiple reverse psychological attacks to those RODs to cause or stimulate ROD's psychological response, the base of technology comes from US patents and China patents.

[0027] Step 2. Find out all kinds of characteristics of psychological response both in the victim's and ROD's by psychological analysis tech., the base of technology come from basic psychological analysis.

[0028] Step 3. Find the different characteristics of psychological responses between the victim's (TP's) and RODs' using relative comparing method; the base of theory come from quantitative science and statistics.

[0029] Step 4. Use of automatic control decay curve (PID control regulate curve) to prove the method of identification is accurate, the base of theory come from automatic control theory.

[0030] The present invention utilizes the victim's thoughts to be read and the victim can use his/her thoughts to establish brain thoughts talking communication with the remote operator using device (ROD) of V2K & RNM, so the invention ask the victim to use his/her thoughts intentionally choose classified content from data base of psychological reaction in a computer to attack those remote operators using device (RODs) via satellite. Because RODs are human beings and they should make psychological response on their device when they receive the victim's remote psychological attacking via satellite and then in turn the victim can feel and sense the RODs' psychological response.

[0031] According theory of psychoanalysis: the psychological response between an active psychological attacker and a psychological attacked person passively have completely different characteristics, so these different psychological responses caused by selective classified psychological attacks can be used both to identify a victim (TP) and those remote operators using device (RODs) of RNM & V2K via satellite.

[0032] From the theory of automatic control decay curve: multiple PID adjustments can achieve a correct control requirements, so the above victim (TP) who use multiple classified and deliberate psychologically attacks the remote operators using device (RODs) V2K & RNM can gradually approach the correct identifying himself/herself is a victim (TP) and identify who are remote operators using device (RODs) RNM & V2K via satellite, with the help of polygraph, the invention ensures the accuracy of identification.

[0033] Additional advantages and features of the invention will become apparent from the description which follows, and may be realized by means of the instrumentalities and combinations particular point out in the appended claims.

[0034] Still further objects and advantages will become apparent from a consideration of the ensuing description and drawings. These and other objectives, features, and advantages of the present invention will become apparent from the following detailed description, the accompanying drawings, and the appended claims.

BRIEF DESCRIPTION OF THE DRAWINGS

[0035] FIG. 1 is a schematic diagram showing an operation of the human and machine according to a preferred embodiment of the present invention.

[0036] FIG. 2A to FIG. 2F illustrates a first set of flowcharts for identify a victim according to the present invention.

[0037] FIG. 3A to FIG. 3E illustrates a second set of flowcharts for identify all kinds status of remote operator or attacker (ROD's) according to the present invention.

[0038] FIG. 4 illustrates an identification decay curve.

[0039] FIG. 5 illustrates examples of disgusting things.

[0040] FIG. 6 illustrates examples of funny stories.

[0041] FIG. 7 illustrates examples of imaginary political attack.

[0042] FIG. 8 illustrates examples of imaginary religious attack.

[0043] FIG. 9 illustrates examples of imaginary national attack.

[0044] FIG. 10 illustrates how TP use HMI touch screen which connects with a controller and a computer to achieve automatic identification.

[0045] FIG. 11A illustrates how TP use HMI touch screen which connects with a controller and a computer to achieve automatic identification.

[0046] FIG. 11B illustrates how TP use HMI touch screen which connects with a controller and a computer to achieve automatic identification.

[0047] FIG. 12A illustrates how TP use HMI touch screen which connects with a controller and a computer to achieve automatic identification.

[0048] FIG. 12B illustrates how TP use HMI touch screen which connects with a controller and a computer to achieve automatic identification.

[0049] FIG. 13 illustrates how TP use HMI touch screen which connects with a controller and a computer to achieve automatic identification.

[0050] FIG. 14 illustrates how TP use HMI touch screen which connects with a controller and a computer to achieve automatic identification.

DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENT

[0051] V2K: What is 'Voice to Skull'? . . . Voice to skull is the transmission of voice, or any other audible or subliminal sound, directly into the hearing sense of a victim. So the invention is based on technologies about of RNM & V2K technology around the world. The painful experience described by victims is consistent with the effect of these technologies in relation to V2K which were described in US patents and China patent.

[0052] The invention is based on these V2K & RNM device operated by human beings and these operators show themselves emotions when they are using these devices to harass victims. On the other hand, victims can feel and sense operator's emotions. This emotional interaction between victim and operators is interactive when these V2K & RNM devices are running.

[0053] The reason to confirm V2K & RNM device operated by human beings is human brain can forget something, because operators frequently forget somethings related victim's history, but victims do not forget the things in himself or herself history. On the other hand, these computer memory and robot memory with artificial intelligent never lost data when programmer programs data into their memory, so only human has memory error, but computer's CPU never has memory data read and write error. So the invention can analyze operator's human emotion which a victim can feel and sense to identify these voice to skull is not victim's auditory hallucination, but they are emotional response from those remote operators. Because there are obvious differences between victim's emotion reaction and those emotions response belong to remote operators using devices of V2K & RNM, so if using the invention method, you can find these differences clearly.

STATEMENT OF GOVERNMENT INTEREST

[0054] The invention can help victims to confirm their grieves and get justice, on the other hand, it can help law enforcement like FBI to find out the fact of cases, as this remote technology is global and transnational crime, so if all kinds of victims enter United States in some related cases, FBI can use the invention as a tool to analysis and identify who are operators (or call them remote attacker), then these operators' (or call them remote attacker) nationality and race; religious belief and political belief, scale of language and dialect, scale of scientific knowledge, even identify these attacker or operator belong to which organization.

[0055] For example, FBI investigated the case of Washington D.C. navy yard gun case, CNN reported on September 26, 2013, the gunman suffered "Low frequency attacks" and that attack drove him to kill. If similar cases happen, the invention can help FBI to investigate.

[0056] Declaration: In this invention, all political, religious attacks or attack a country are human brain thoughts imagination attacks with viewing videos, pictures & other materials in computer databases in non-public site, there is neither any verbal attack nor behavioral attack. So do not cause insulting anyone.

[0057] Description of the method of the present invention:

[0058] Abbreviation:

[0059] PM: polygraph meter (computerized digital)

[0060] ISA: an identification system administrator

[0061] TP: a tested person

[0062] RODs: remote operators using devices of V2K & RNM technology

[0063] V2K: Voice to Skull

[0064] RNM: Remote Neural Monitoring Technology

[0065] HMI: human machine interface

[0066] The invention use of victim's (TP's) intentional selective and classified thoughts to launch some psychological attacks to those remote and covered operators (RODs) using devices of V2K & RNM to stimulate those operator's (ROD's) corresponding and classified emotional responses which victim (TP) can feel and sense.

[0067] Then the invention use of relatively comparing methods, designed procedures in flowcharts classify emotional responses between the victim's (TP's) and remote operators' (ROD's), designed procedures in flowchart can find out there are significant differences between victim's (TP's) and remote operators' (ROD's) with judgement diamond frames. Use of these difference, computer and controller can identify both victim (TP) and classified identify all kinds status of remote operators (ROD) using devices of V2K and RNM by checking flowcharts FIG. 2 A to FIG. 2F and FIG. 3A to FIG. 3E automatically.

[0068] These classified identities including remote operator's (ROD's) nationality, race, political trend, religious belief, organization, scale of language and dialect, scale of scientific knowledge.

[0069] When identifying begin, a identifying curve indicates identifying error changes gradually from large to small and approach to accurate identification at last, the principle is similar with automatic control decay curve, which is shown in FIG. 4.

[0070] Such similar curve is widely used for PID controller in automatic control technology which is used to control like temperature and pressure, but the invention uses it to identify victim (TP) and to identify ROD, mainly for identifying ROD.

[0071] Referring to FIGS. 1-14, the present invention consists six parts:

[0072] I. Polygraph Meter: (PM)

[0073] There are many kinds of ordinary polygraph meters.

[0074] Polygraph meter is used to confirm the tested person's (TP's) answer is true.

[0075] If high class digital polygraph which can connects with a computer and sent truth or fails signals automatically is available, the automatic system of identification could run very fast.

[0076] Expensive and high accurate instrument is using fMRI (Functional Magnetic Resonance Imagine) when in real need. Illuminating lies with brain scan outshines polygraph test, fMRI spots more lies in first controlled comparison of the two technologies.

[0077] II. ISA: an identification system administrator

[0078] An identification administrator (ISA) asks a tested person (TP) to choose some special contents from a database in a computer which could cause those remote operator's or attacker's (ROD's) psychological reaction and response via V2K & RNM device, but cannot cause tested person's (TP) same psychological reaction. Meanwhile, the tested person (TP) to answer YES or NO with pressing designed buttons on HMI according those designed questions contents which also shows on HMI in diamond frames in flowcharts in a computer about attacker's or call remote dives operators' (ROD's) psychological reaction and response which the tested person (TP) can feel or sense, ISA then checks the polygraph meter to confirm TP' answer is true.

[0079] III. Tested person (TP)

[0080] Tested person (TP) should claim himself/herself is a victim of abusing V2K & RNM technology. Tested person who is connected to polygraph meter and answer questions which can be analyzed and identify who is the remote attacker or operator (ROD) using V2K & RNM device, furthermore the invention may analyze and identify attacker's or operator's (ROD's) nationality, race, political belief and religious belief, scale of language and dialect, scale of scientific knowledge and which organization by the designed procedures in a computer.

[0081] Of course, the qualified tested person (TP) should be emotional stable and rational thinking, as well as cooperative with identification system administrator (ISA).

[0082] IV. A computer contains seven classified databases a; b; c; d; e; f and g which classify psychological attacking contents. Every classified database can let tested person (TP) choose contents to launch some classified psychological attacks to ROD to cause ROD's classified psychological responses.

[0083] This the ROD's classified psychological responses can be used to identify who is victim (TP) and who is attacker or operator (ROD) by operating programs in flowcharts in a computer and in a controller.

[0084] Of course, the classified contents can be updated and increased according different requirements in a computer used in identifying process.

[0085] V. A controller: A controller manages logical calculations when automatic system is running. It also contains twelve counters in flowcharts, flowcharts is a programmed software, among them, seven counters are successful counters which record every time successful identification and accumulate the times of successful identification: a(n), b(n), c(n), d(n), e(n), f(n) and g(n). Another five counters are

failure counters which record every time failure identification and accumulate the times of identification: fail a(n), fail b(n), fail c(n), fail d(n) and fail e(n).

[0086] VI. A human-machine interface (HMI), or called touch screen: the touch screen will have eight pages, except the main page FIG. 10, they are FIG. 11A (HMI page a); FIG. 11B (HMI page a done); FIG. 12A (HMI page b); FIG. 12B (HMI page b done); FIG. 13 (HMI page c); FIG. 14 (HMI page c done); these Figs have been drawn out, other FIG. 3A to FIG. 3E are similar, so does not been drawn out. Touch screen operating pages represents one section of flowchart shows designed questions to TP, TP also answers questions with pressing “YES” or “NO” buttons on touch screen; Finally, the touch screen also shows result of identifications with English (or other languages) displaying window to TP and IEA. At same time the touch screen connected with computer keep communication and controller with some baud rate. All programs are running in background of HMI touch screen in a controller and a computer. There one main program, eight subroutines and one interrupt. Main program calls subroutine when in need. An interrupt program is triggered when PM check for a lie.

[0087] Judgement contains in every diamond in flowcharts, TP answers questions in every diamond frame which shows on HMI touch screen and a polygraph meter to confirm if TP’s every answer is true.

[0088] Every diamond frame have two flow lines directions, word “success” beside the line indicates one time of successful identification; word “fail” beside the line indicates one time of failure identification.

[0089] There are two sets of flowcharts which are programmed software in a controller.

[0090] The first set of flowcharts consist of FIG. 2A to FIG. 2F which are used to identify a victim (TP) of abuse technology of V2K & RNM, the input contents from database a, b and e; there are three successful counters: a(n), b(n) and e(n), there are also three fail counters: fail a(n), fail b(n) and fail e(n).

[0091] Among these fail counters, they represent any failure identification, fail a(n), fail b(n), fail e(n) in first set of flowcharts; but fail counters fail c(n) and fail d(n) in second set of flowcharts.

[0092] In the identifying process, the number in successful counters is divided by the number in fail counters, if the quotient larger or equal to 9, the identification has been completed. In case of need, the quotient can be larger than 9.

[0093] In order to avoiding the divisor (denominator of the score) is zero, we assign an initial value 1 to every fail counter. In the fractional number in a(n), b(n), c(n), d(n) and e(n) are numerator, but the number in fail a(n), fail b(n), fail c(n), fail d(n) and fail e(n) are denominator.

[0094] The second set of flowcharts consist of FIG. 3A to FIG. 3E, which are used to identify those remote operators’ or attackers’ (ROD’s) all kinds status, who are using devices of V2K & RNM, the input contents from database c, d, f and g.

[0095] There are also two successful counters: c(n) and d(n), two fail counters: fail c(n) and fail d(n), but there are not fail counter fail f(n) and fail g(n).

[0096] Each flowchart input contents according type and characteristics from contents database in a computer, ISA asks TP to choose some suitable contents form the database to launch a psychological thoughts attack to ROD, then TP

answer questions which show on HMI in diamond frame in flowcharts about what kind of psychological response from ROD which TP can feel and sense. Seven category of input contents are in seven classified databases.

[0097] Every database stores different content like following, but these contents in different databases inputs classified content only the method put into using. For examples, database of category d can input twenty five names of countries and more different races, because it was said there were twenty five countries own the technology of remote neutral monitoring & voice to skull or relevant equipment. So ISA can store these names of twenty five countries and their races in database d of a computer when the method in operating.

[0098] After TP answers the questions, ISA checks PM to confirm if the answer is true.

[0099] Seven category of input contents in seven classified databases, each database stores different content like following, but these contents in different databases store classified contents only the method put into running.

[0100] Category a:

[0101] The category a database contains a lot of contents which are specifically causing remote operator’s (ROD’s) using devices of V2K & RNM disgusting psychological response, but they will not cause tested person’s (TP) disgusting psychological reaction, because the identification system administrator (ISA) lets tested person (TP) himself/herself choose some disgusting contents in this database intentionally to cause ROD disgusting psychological response only, but does not cause the tested person (TP) himself/herself disgusting psychological reaction.

[0102] After TP has chosen a kind of disgusting content from database a, he/she must follow instructions in the computer to launch a thoughts imagination psychological attack to ROD and then answer question in diamond frame in flowchart which shows on HMI touch screen, ISA then checks PM to confirm TP’s answer is true.

[0103] According automatic control theory, multiple TP’s disgusting psychological attacking cycles will generate precise identification: the disgusting psychological response comes from ROD, but does not belong to TP.

[0104] For example, in the database, TP find a picture which describe “the fresh stinky stool is pulled out by me and sent to ROD as breakfast with a picture of plate of stool.

[0105] It is common sense nearly everyone never feels disgusting facing himself/herself fresh stinky stool which just pulled out, but everyone may feel very disgusting to see others fresh stinky stool in short distance. This psychological experiment has been confirmed in some Chinese victims who imagine showing himself/herself fresh stinky stool for those remote operators (RODs) using devices of V2K & RNM, then caused disgusting feeling from those remote operators (RODs) using devices of V2K & RNM which these victims can feel and sense. This experiment can be repeatedly confirmed to same result.

[0106] FIG. 2A to FIG. 2F illustrates a first phase of flowchart. FIG. 5 illustrates examples of disgusting things.

[0107] Category b:

[0108] Category b is used for identifying a TP who is a victim of abuse technology of RNM & V2K.

[0109] The category b database contents which are specifically causing remote operator (ROD) using devices of V2K & RNM funny psychological response. E.g., LAUFHING, but they will not cause tested person’s (TP’s) funny

psychological reaction, because the identification system administrator (ISA) lets tested person (TP) himself/herself choose some funny stories or humor contents in this database intentionally only to cause ROD's funny psychological response, but does not cause the tested person (TP) himself/herself funny psychological reaction. For example, the host of a talk show makes audience laugh, but the joke player himself/herself does not laugh.

[0110] According UK English learning book "New Conception English: third set book text 29 "Funny or Not?" which described people in indifferent country and different race have different humor sense.

[0111] Example of a funny story:

[0112] "When my five years old son was 'newly' potty trained, I was using the restroom at a supermarket. He gets the toilet paper for me and when I say 'thank you' and try to take it from him. He says (loudly), "No, Mommy, bend over and I will wipe your butt." He was so proud of himself for trying to help me. My face was red and I could hear chuckles all around me."

[0113] After TP has chosen a kind of funny content from database a, he/she must flow instruction in a computer to launch a thoughts imagination psychological attack to RODs and then answer question in diamond frame in flowchart, which shows on touch screen, ISA checks PM to confirm TP's answer is true.

[0114] According automatic control theory, multiple TP's funny psychological attacking cycles will generate precise identification: the funny psychological response comes from ROD but does not belong to TP's.

[0115] FIG. 2A to FIG. 2F illustrates a first phase of flowchart. FIG. 6 illustrates example of funny stories.

[0116] Category c:

[0117] Category c is used for identifying ROD's political trend and religious belief.

[0118] The category c database contains all kinds of anti-political trend and anti-religious belief are specifically causing remote operator's (ROD's) using devices of V2K & RNM angry psychological response: angry curse and refutation, but they will not cause tested person's (TP's) angry psychological reaction, because the identification system administrator (ISA) lets tested person (TP) himself/herself choose some contents from database which fiercely oppose ROD's political trends or contents which seriously insult ROD's religious beliefs in this database intentionally only to cause ROD's angry psychological response, but does not cause the tested person (TP) himself/herself angry psychological reaction.

Example 1

[0119] TP chooses one of these political party's symbols which RODs belong to the political party from database c to attack it with brain thinking imagination with stinky stool stain political symbols or burn political symbols etc. to cause ROD's antipathy and angry which TP can feel clearly.

Example 2

[0120] TP chooses one of these religious symbols which RODs belong to the religious organization from database c to attack it with brain thinking imagination with stinky stool to stain the religious symbols and burn religious book etc. to cause ROD's antipathy and angry which TP can feel clearly.

[0121] There is a more very clear example: we assume the TP is not a Communist Party member, but ROD is a Communist Party member who thinks that the Communist Party flag and Communist Party emblem are sacred and inviolable. Then we ask TP to insult the Communist Party flag and Communist Party emblem with stinky stool to stain it or burn them, in this case, TP in the invention system will feel and sense ROD's angry, we are sure ROD is a Communist Party member, because people who are not Communist Party member feel nothing insulting the Communist Party flag and Communist Party emblem in such way, only a Communist Party member can feel angry, so there is not any psychologist can deny the accuracy of the invention of identification.

[0122] After TP has chosen a kind of content from database c, he/she must follow instruction in a computer to launch a thoughts imagination psychological attack to ROD and then answer question in diamond frame in flowchart which shows on touch screen, then ISA checks PM to confirm TP's answer is true.

[0123] According automatic control theory, multiple TP's political or religious psychological attacking cycles will generate precise identification: the angry psychological response comes from RODs because of political or religious reasons, but does not belong to TP's.

[0124] FIG. 3A to FIG. 3E illustrates a second phase of flowchart. FIG. 7 illustrates examples of a man pulling a large pile of stool on a flag of a political party. FIG. 8 illustrates examples of a man pulling a large pile of stool on a sacred sign of religion. FIG. 8

[0125] Category d:

[0126] Category d is used for identifying ROD's nationality and race.

[0127] The category d database contents are different countries and different races which specifically cause remote operator's (ROD's) using devices of V2K & RNM angry psychological response: angry curse, because the identification system administrator (ISA) lets tested person (TP) himself/herself choose some contents which destroy ROD's country and ROD's race in this database intentionally only to cause ROD angry psychological response, but does not cause the tested person (TP) himself/herself angry psychological reaction.

[0128] For example, TP choose some nuclear explosion videos in database d and meanwhile use thoughts to tell ROD: "I hope to use nuclear weapon to destroy your country and kill all your family members, let your ROD's body and corpse became vapor or steam in high temperature, kill all your race from the earth", such psychological attack is sure to cause ROD's angry response which TP can feel and sense. Once ROD's angry is identified, ROD's nationality and race have been identified.

[0129] For example: TP can assume imagining huge earthquake destroying a country video choosing from computer database to do a country where RODs live to cause ROD's antipathy and angry which TP can feel clearly.

[0130] For example: TP can assume imagining huge tsunami drowning a country video choosing from computer database to launch a psychological attack a country where RODs live to cause ROD's antipathy and angry which TP can feel clearly.

[0131] After TP has chosen a kind of content from database c, he/she must follow instruction in a computer to launch a thoughts imagination psychological attack to ROD

and then answer question in diamond frame in flowchart which shows on touch screen then ISA checks PM to confirm TP's answer is true.

[0132] According automatic control theory, multiple TP's nationality or race psychological attacking cycles will generate precise identification: the angry psychological response comes from ROD, because ROD's nationality or race are attacked and ROD are infuriated, but these does not belong to TP's.

[0133] FIG. 3A to FIG. 3E illustrates a second phase of flowchart. FIG. 9 illustrates examples of a mushroom cloud of nuclear explosion rises on the land of a particular country.

[0134] Category e:

[0135] Category e is used for identifying a TP is a victim of abuse technology of RNM & V2K.

[0136] The category e database contents with all kinds of foreign terrorist organizations are specifically causing remote operator's using devices of V2K & RNM ROD's angry psychological response: strongly deny, because the identification system administrator (ISA) lets tested person (TP) himself/herself choose some contents which accuse RODs committed a terrorist crime, such as terrorist attack on United States and RODs belong to some terrorist organization to cause ROD's strongly deny which TP can feel and sense. Because everyone knows any terrorist who attacked USA, US government must eliminate the terrorist in anywhere in the world.

[0137] On the other hand, TP is not a terrorist and never commit felony, so TP does not need to deny or admit.

[0138] So once RODs make a strongly deny, it is sure the response from RODs and it is sure the response is not auditory hallucination belong the victim (TP). This is an important step to identify a victim of abusing technology of V2K & RNM.

[0139] After TP has chosen a kind of content from database e, he/she must follow instruction in a computer to launch a thoughts imagination psychological attack to ROD and then answer question in diamond frame in flowchart which shows on touch screen, then ISA checks PM to confirm TP's answer is true.

[0140] According automatic control theory, multiple TP's accusing ROD's belong terrorist organizations or convicted terrorist crime psychological attacking cycles will generate precise identification: the strongly denying psychological response comes from ROD, but these does not belong to TP's.

[0141] FIG. 2A to FIG. 2F illustrates a first phase of flowchart.

[0142] Foreign organizations will be searched from time to time and added into the database e by ISA when in need.

[0143] Category f:

[0144] Category f is used for identifying ROD's scale of language and dialect.

[0145] The category f database contents with different languages and different dialects are specifically causing remote operator's (ROD's) using devices of V2K & RNM slow down psychological response: lighten harassment or stop harassment, because the identification system administrator (ISA) lets tested person (TP) intentionally imagine something using a foreign language or dialect which ROD do not know. The reason why ROD lighten harassment or stop harassment when they meet some foreign language or dialect which they do not know, these ROD need time to understand and consider how response on their device of V2K & RNM, so these ROD loosen or stop their harassment to TP's brain temporarily.

[0146] For example, we assume those ROD don't understand English, only know Chinese language, in such case, TP uses English to consider something, or even TP reads an English article, at this point, TP can find the harassment form ROD lighten or stop, the reason is those ROD don't understand what TP is considering or reading, so those ROD's reaction on their devices gets slow or stop temporarily.

[0147] Another example, we assume TP can speak both dialects Cantonese and Mandarin, but those ROD only can speak and understand Mandarin, in this case, TP use Cantonese consider something, TP also can find the harassment form ROD lighten or stop, the reason is those ROD don't understand what TP is considering with Cantonese, so those ROD's reaction on their devices get slow or stop temporarily.

[0148] After TP has chosen a kind of content from database f, he/she must follow instruction in a computer to launch a thoughts imagination psychological attack to ROD and then answer question in diamond frame in flowchart which shows on touch screen, then ISA checks PM to confirm TP's answer is true.

[0149] According automatic control theory, multiple TP's psychological attacking cycles with languages or dialect will generate precise identification: the harassment become lighten or stops response comes from ROD, but these does not belong to TP's.

[0150] FIG. 3A to FIG. 3E illustrate a second phase of flowchart.

[0151] Table 1 shows examples of languages spoken in different countries of the world.

TABLE 1

Languages spoken in different countries of the world	
Country	Languages spoken (the percent of the population that speaks a particular language is also given, if available)
Afghanistan	Dari Persian, Pashtu (both official), other Turkic and minor languages
Albania	Albanian (Tosk is the official dialect), Greek
Algeria	Arabic (official), French, Berber dialects
Andorra	Catalán (official), French, Castilian, Portuguese
Angola	Portuguese (official), Bantu and other African languages
Antigua and Barbuda	English (official), local dialects
Argentina	Spanish (official), English, Italian, German, French
Armenia	Armenian 98%, Yezidi, Russian
Australia	English 79%, native and other languages

TABLE 1-continued

Languages spoken in different countries of the world	
Country	Languages spoken (the percent of the population that speaks a particular language is also given, if available)
Austria	German (official nationwide); Slovene, Croatian, Hungarian (each official in one region)
Azerbaijan	Azerbaijani Turkic 89%, Russian 3%, Armenian 2%, other 6% (1995 est.)
Bahamas	English (official), Creole (among Haitian immigrants)
Bahrain	Arabic, English, Farsi, Urdu
Bangladesh	Bangla (official), English
Barbados	English
Belarus	Belorussian (White Russian), Russian, other
Belgium	Dutch (Flemish) 60%, French 40%, German less than 1% (all official)
Belize	English (official), Spanish, Mayan, Garifuna (Carib), Creole
Benin	French (official), Fon, Yoruba, tribal languages
Bhutan	Dzongkha (official), Tibetan dialects (among Bhotes), Nepalese dialects (among Nepalese)
Bolivia	Spanish, Quechua, Aymara (all official)
Bosnia and Herzegovina	Bosnian, Croatian, Serbian
Botswana	English 2% (official), Setswana 78%, Kalanga 8%, Sekgalagadi 3%, other (2001)
Brazil	Portuguese (official), Spanish, English, French
Brunei	Malay (official), English, Chinese
Bulgaria	Bulgarian 85%, Turkish 10%, Roma 4%
Burkina Faso	French (official); native African (Sudanic) languages 90%
Burundi	Kirundi and French (official), Swahili
Cambodia	Khmer 95% (official), French, English
Cameroon	French, English (both official); 24 major African language groups
Canada	English 59.3%, French 23.2% (both official); other 17.5%
Cape Verde	Portuguese, Criuolo
Central African Republic	French (official), Sangho (lingua franca, national), tribal languages
Chad	French, Arabic (both official); Sara; more than 120 languages and dialects
Chile	Spanish
China	Standard Chinese (Mandarin/Putonghua), Yue (Cantonese), Wu (Shanghaiese), Minbei (Fuzhou), Minnan (Hokkien-Taiwanese), Xiang, Gan, Hakka dialects, minority languages
Colombia	Spanish
Comoros	Arabic and French (both official), Shikomoro (Swahili/Arabic blend)
Congo, Democratic Republic of the	French (official), Lingala, Kingwana, Kikongo, Tshiluba
Congo, Republic of	French (official), Lingala, Monokutuba, Kikongo, many local languages and dialects
Costa Rica	Spanish (official), English
Côte d'Ivoire	French (official) and African languages (Dioula esp.)
Croatia	Croatian 96% (official), other 4% (including Italian, Hungarian, Czech, Slovak, German)
Cuba	Spanish
Cyprus	Greek, Turkish (both official); English
Czech Republic	Czech
Denmark	Danish, Faroese, Greenlandic (Inuit dialect), German; English is the predominant second language
Djibouti	French and Arabic (both official), Somali, Afar
Dominica	English (official) and French patois
Dominican Republic	Spanish
East Timor	Tetum, Portuguese (official); Bahasa Indonesia, English; other indigenous languages, including Tetum, Galole, Mambae, and Kemak
Ecuador	Spanish (official), Quechua, other Amerindian languages
Egypt	Arabic (official), English and French widely understood by educated classes
El Salvador	Spanish, Nahua (among some Amerindians)
Equatorial Guinea	Spanish, French (both official); pidgin English, Fang, Bubi, Ibo
Eritrea	Afar, Arabic, Tigre and Kunama, Tigrinya, other Cushitic languages
Estonia	Estonian 67% (official), Russian 30%, other (2000)
Ethiopia	Amharic, Tigrigna, Orominga, Guaragigna, Somali, Arabic, English, over 70 others

TABLE 1-continued

Languages spoken in different countries of the world	
Country	Languages spoken (the percent of the population that speaks a particular language is also given, if available)
Fiji	English (official), Fijian, Hindustani
Finland	Finnish 92%, Swedish 6% (both official); small Sami- (Lapp) and Russian-speaking minorities
France	French 100%, rapidly declining regional dialects (Provençal, Breton, Alsatian, Corsican, Catalan, Basque, Flemish)
Gabon	French (official), Fang, Myene, Nzebi, Bapounou/Eschira, Bandjabi
Gambia	English (official), Mandinka, Wolof, Fula, other indigenous
Georgia	Georgian 71% (official), Russian 9%, Armenian 7%, Azerbaijani 6%, other 7% (Abkhaz is the official language in Abkhazia)
Germany	German
Ghana	English (official), African languages (including Akan, Moshi-Dagomba, Ewe, and Ga)
Greece	Greek 99% (official), English, French
Grenada	English (official), French patois
Guatemala	Spanish 60%, Amerindian languages 40% (23 officially recognized Amerindian languages, including Quiche, Cakchiquel, Kekchi, Mam, Garifuna, and Xinca)
Guinea	French (official), native tongues (Malinké, Susu, Fulani)
Guinea-Bissau	Portuguese (official), Criolo, African languages
Guyana	English (official), Amerindian dialects, Creole, Hindi, Urdu
Haiti	Creole and French (both official)
Honduras	Spanish (official), Amerindian dialects; English widely spoken in business
Hungary	Magyar (Hungarian) 94%, other 6%
Iceland	Icelandic, English, Nordic languages, German widely spoken
India	Hindi 30%, English, Bengali, Gujarati, Kashmiri, Malayalam, Marathi, Oriya, Punjabi, Tamil, Telugu, Urdu, Kannada, Assamese, Sanskrit, Sindhi (all official); Hindi/Urdu; 1,600+ dialects
Indonesia	Bahasa Indonesia (official), English, Dutch, Javanese, and more than 580 other languages and dialects
Iran	Persian and Persian dialects 58%, Turkic and Turkic dialects 26%, Kurdish 9%, Luri 2%, Balochi 1%, Arabic 1%, Turkish 1%, other 2%
Iraq	Arabic (official), Kurdish (official in Kurdish regions), Assyrian, Armenian
Ireland	English, Irish (Gaelic) (both official)
Israel	Hebrew (official), Arabic, English
Italy	Italian (official); German-, French-, and Slovene-speaking minorities
Jamaica	English, Jamaican Creole
Japan	Japanese
Jordan	Arabic (official), English
Kazakhstan	Kazak (Qazaq, state language) 64%; Russian (official, used in everyday business) 95% (2001 est.)
Kenya	English (official), Swahili (national), and numerous indigenous languages
Kiribati	English (official), I-Kiribati (Gilbertese)
Korea, North	Korean
Korea, South	Korean, English widely taught
Kosovo	Albanian (official), Serbian (official), Bosnian, Turkish, Roma
Kuwait	Arabic (official), English
Kyrgyzstan	Kyrgyz, Russian (both official)
Laos	Lao (official), French, English, various ethnic languages
Latvia	Latvian 58% (official), Russian 38%, Lithuanian, other (2000)
Lebanon	Arabic (official), French, English, Armenian
Lesotho	English, Sesotho (both official); Zulu, Xhosa
Liberia	English 20% (official), some 20 ethnic-group languages
Libya	Arabic, Italian, and English widely understood in major cities
Liechtenstein	German (official), Alemannic dialect
Lithuania	Lithuanian 82% (official), Russian 8%, Polish 6% (2001)
Luxembourg	Luxembourgish (national) French, German (both administrative)
Macedonia	Macedonian 67%, Albanian 25% (both official); Turkish 4%, Roma 2%, Serbian 1% (2002)

TABLE 1-continued

Languages spoken in different countries of the world	
Country	Languages spoken (the percent of the population that speaks a particular language is also given, if available)
Madagascar	Malagasy and French (both official)
Malawi	Chichewa 57.2% (official), Chinyanja 12.8%, Chiyao 10.1%, Chitumbuka 9.5%, Chisena 2.7%, Chilomwe 2.4%, Chitonga 1.7%, other 3.6% (1998)
Malaysia	Bahasa Melayu (Malay, official), English, Chinese dialects (Cantonese, Mandarin, Hokkien, Hakka, Hainan, Foochow), Tamil, Telugu, Malayalam, Panjabi, Thai; several indigenous languages (including Iban, Kadazan) in East Malaysia
Maldives	Maldivian Dhivehi (official); English spoken by most government officials
Mali	French (official), Bambara 80%, numerous African languages
Malta	Maltese and English (both official)
Marshall Islands	Marshallese 98% (two major dialects from the Malayo-Polynesian family), English widely spoken as a second language (both official); Japanese
Mauritania	Hassaniya Arabic (official), Pulaar, Soninke, French, Wolof
Mauritius	English less than 1% (official), Creole 81%, Bojpoori 12%, French 3% (2000)
Mexico	Spanish, various Mayan, Nahuatl, and other regional indigenous languages
Micronesia	English (official, common), Chukese, Pohnpeian, Yapese, Kosrean, Ellithian, Woleaian, Nukuoro, Kapingamarangi
Moldova	Moldovan (official; virtually the same as Romanian), Russian, Gagauz (a Turkish dialect)
Monaco	French (official), English, Italian, MonEgasque
Mongolia	Mongolian, 90%; also Turkic and Russian (1999)
Montenegro	Serbian/Montenegrin (Ijekavian dialect-official)
Morocco	Arabic (official), Berber dialects, French often used for business, government, and diplomacy
Mozambique	Portuguese 9% (official; second language of 27%), Emakhuwa 26%, Xichangana 11%, Elomwe 8%, Cisena 7%, Echuwabo 6%, other Mozambican languages 32% (1997)
Myanmar	Burmese, minority languages
Namibia	English 7% (official), Afrikaans is common language of most of the population and of about 60% of the white population, German 32%; indigenous languages: Oshivambo, Herero, Nama
Nauru	Nauruan (official), English
Nepal	Nepali 48% (official), Maithali 12%, Bhojpuri 7%, Tharu 6%, Tamang 5%, others. English spoken by many in government and business (2001)
Netherlands	Dutch, Frisian (both official)
New Zealand	English, Maori (both official)
Nicaragua	Spanish 98% (official); English and indigenous languages on Atlantic coast (1995)
Niger	French (official), Hausa, Djerna
Nigeria	English (official), Hausa, Yoruba, Ibo, Fulani, and more than 200 others
Norway	Bokmål Norwegian, Nynorsk Norwegian (both official); small Sami- and Finnish-speaking minorities (Sami is official in six municipalities)
Oman	Arabic (official), English, Baluchi, Urdu, Indian dialects
Pakistan	Urdu 8%, English (both official); Punjabi 48%, Sindhi 12%, Siraiki (a Punjabi variant) 10%, Pashtu 8%, Balochi 3%, Hindko 2%, Brahui 1%, Burushaski, and others 8%
Palau	Palauan 64.7%, English 9.4%, Sonsoralese, Tobi, Angaur (each official on some islands), Filipino 13.5%, Chinese 5.7%, Carolinian 1.5%, Japanese 1.5%, other Asian 2.3%, other languages 1.5% (2000)
Palestinian State (proposed)	Arabic, Hebrew, English
Panama	Spanish (official), English 14%, many bilingual
Papua New Guinea	Tok Pisin (Melanesian Pidgin, the lingua franca), Hiri Motu (in Papua region), English 1%-2%; 715 indigenous languages
Paraguay	Spanish, Guarani (both official)
Peru	Spanish, Quechua (both official); Aymara; many minor Amazonian languages

TABLE 1-continued

Languages spoken in different countries of the world	
Country	Languages spoken (the percent of the population that speaks a particular language is also given, if available)
Philippines	Filipino (based on Tagalog), English (both official); eight major dialects: Tagalog, Cebuano, Ilocano, Hiligaynon or Ilonggo, Bicol, Waray, Pampango, and Pangasinense
Poland	Polish 98% (2002)
Portugal	Portuguese (official), Mirandese (official, but locally used)
Qatar	Arabic (official); English a common second language
Romania	Romanian (official), Hungarian, German
Russia	Russian, others
Rwanda	Kinyarwanda, French, and English (all official); Kiswahili in commercial centers
St. Kitts and Nevis	English
St. Lucia	English (official), French patois
St. Vincent and the Grenadines	English, French patois
Samoa	Samoan, English
San Marino	Italian
São Tomé and Príncipe	Portuguese (official)
Saudi Arabia	Arabic
Senegal	French (official); Wolof, Pulaar, Jola, Mandinka
Serbia	Serbian (official); Romanian, Hungarian, Slovak, and Croatian (all official in Vojvodina); Albanian (official in Kosovo)
Seychelles	Seselwa Creole 92%, English 5%, French (all official) (2002)
Sierra Leone	English (official), Mende (southern vernacular), Temne (northern vernacular), Krio (lingua franca)
Singapore	Mandarin 35%, English 23%, Malay 14.1%, Hokkien 11.4%, Cantonese 5.7%, Teochew 4.9%, Tamil 3.2%, other Chinese dialects 1.8%, other 0.9% (2000)
Slovakia	Slovak 84% (official), Hungarian 11%, Roma 2%, Ukrainian 1% (2001)
Slovenia	Slovenian 91%, Serbo-Croatian 5% (2002)
Solomon Islands	English 1%-2% (official), Melanesian pidgin (lingua franca), 120 indigenous languages
Somalia	Somali (official), Arabic, English, Italian
South Africa	IsiZulu 23.8%, IsiXhosa 17.6%, Afrikaans 13.3%, Sepedi 9.4%, English 8.2%, Setswana 8.2%, Sesotho 7.9%, Xitsonga 4.4%, other 7.2%
South Sudan	English (official), Arabic (includes Juba and Sudanese variants) (official), regional languages include Dinka, Nuer, Bari, Zande, Shilluk
Spain	Castilian Spanish 74% (official nationwide); Catalan 17%, Galician 7%, Basque 2% (each official regionally)
Sri Lanka	Sinhala 74% (official and national), Tamil 18% (national), other 8%; English is commonly used in government and spoken competently by about 10%
Sudan	Arabic (official), Nubian, Ta Bedawie, diverse dialects of Nilotic, Nilo-Hamitic, Sudanic languages, English
Suriname	Dutch (official), Surinamese (lingua franca), English widely spoken, Hindustani, Javanese
Swaziland	English, siSwati (both official)
Sweden	Swedish, small Sami- and Finnish-speaking minorities
Switzerland	German 64%, French 20%, Italian 7% (all official); Romansch 0.5% (national)
Syria	Arabic (official); Kurdish, Armenian, Aramaic, Circassian widely understood; French, English somewhat understood
Taiwan	Chinese (Mandarin, official), Taiwanese (Min), Hakka dialects
Tajikistan	Tajik (official), Russian widely used in government and business
Tanzania	Swahili, English (both official); Arabic; many local languages
Thailand	Thai (Siamese), English (secondary language of the elite), ethnic and regional dialects
Togo	French (official, commerce); Ewé, Mina (south); Kabyé, Dagomba (north); and many dialects
Tonga	Tongan (an Austronesian language), English
Trinidad and Tobago	English (official), Hindi, French, Spanish, Chinese

TABLE 1-continued

Languages spoken in different countries of the world	
Country	Languages spoken (the percent of the population that speaks a particular language is also given, if available)
Tunisia	Arabic (official, commerce), French (commerce)
Turkey	Turkish (official), Kurdish, Dimli, Azeri, Kabardian
Turkmenistan	Turkmen 72%; Russian 12%; Uzbek 9%, other 7%
Tuvalu	Tuvaluan, English, Samoan, Kiribati (on the island of Nui)
Uganda	English (official), Ganda or Luganda, other Niger-Congo languages, Nilo-Saharan languages, Swahili, Arabic
Ukraine	Ukrainian 67%, Russian 24%, Romanian, Polish, Hungarian
United Arab Emirates	Arabic (official), Persian, English, Hindi, Urdu
United Kingdom	English, Welsh, Scots Gaelic
United States	English 82%, Spanish 11% (2000)
Uruguay	Spanish, Portuguese, or Brazilerio
Uzbekistan	Uzbek 74.3%, Russian 14.2%, Tajik 4.4%, other 7.1%
Vanuatu	Bislama 23% (a Melanesian pidgin English), English 2%, French 1% (all 3 official); more than 100 local languages 73%
Vatican City (Holy See)	Italian, Latin, French, various other languages
Venezuela	Spanish (official), numerous indigenous dialects
Vietnam	Vietnamese (official); English (increasingly favored as a second language); some French, Chinese, Khmer; mountain area languages (Mon-Khmer and Malayo-Polynesian)
Western Sahara (proposed state)	Hassaniya Arabic, Moroccan Arabic
Yemen	Arabic
Zambia	English (official); major vernaculars: Bemba, Kaonda, Lozi, Lunda, Luvala, Nyanja, Tonga; about 70 other indigenous languages
Zimbabwe	English (official), Shona, Ndebele (Sindebele), numerous minor tribal dialects

[0152] Category g:

[0153] Category g is used for identifying ROD's scale of scientific knowledge.

[0154] The category g database contents with different scientific knowledge are specifically causing remote operator's using devices of V2K & RNM ROD's slow down psychological response: lighten harassment or stop harassment, because the identification system administrator (ISA) let tested person TP intentionally imagine some knowledge of science or technology which ROD do not know.

[0155] The reason why ROD lighten harassment or stop harassment when they meet some knowledge of science and technology which they do not know, these ROD need time to understand and consider how response on their device of V2K & RNM, so these ROD lighten or stop their harassment to TP.

[0156] For examples, assume a TP has computer technology knowledge and know how change theses data among hexadecimal, binary and decimal. At this point, TP can change a hexadecimal data into a binary data, then change the binary data into decimal data within five seconds which are from database in computer.

[0157] We assume there are requirements in database of a computer asking the TP to answer the questions:

[0158] 1. Please change B into binary, then change it into decimal.

[0159] The TP answer: binary is 1011, then decimal is 11 within five seconds.

[0160] 2. Please change F into binary, then change it into decimal.

[0161] The TP answer: binary is 1111, then decimal is 15 within five seconds.

[0162] When these questions are processing, we can find an obvious phenomenon: TP feel or sense the remote harassment get weaken or even disappeared temporarily, the reason is that those ROD do not understand how change data among hexadecimal, binary and decimal, so those remote operators (ROD) have no way to response on the device of V2K & RNM as soon as possible.

[0163] All these ways can be repeatedly identified to confirm its accuracy.

[0164] After TP has chosen a kind of content from database g, he/she must follow instruction in a computer to launch a thoughts imagination psychological attack to ROD and then answer question in diamond frame in flowchart which shows on touch screen, then ISA checks PM to confirm TP's answer is true.

[0165] According automatic control theory, multiple TP's psychological attacking cycles with scientific knowledge will generate precise identification: the harassment become lighten or stops response comes from ROD, but these does not belong to TP's

[0166] FIG. 3A to FIG. 3E illustrate a second phase of flowchart.

[0167] Table 2 shows examples of different kinds of sciences.

TABLE 2

List of different kinds of sciences	
Name of Sciences	Description
Acoustics	The study of sound (or the science of sound)
Aerodynamics	The study of the motion and control of solid bodies like aircraft, missiles, etc., in air
Aeronautics	The science or art of flight
Aeronomy	The study of the earth's upper atmosphere, including its composition, density, temperature and chemical reactions, as recorded by sounding rockets and earth satellites
Aerostatics	The branch of statics that deals with gases in equilibrium and with gases and bodies in them
Aetiology	The science of causation
Agrobiology	The science of plant life and plant nutrition
Agronomy	The science of soil management and the production of field crops
Agrostology	The study of grasses
Alchemy	Chemistry in ancient times
Anatomy	The science dealing with the structure of animals, plants or human body
Anthropology	The science that deals with the origins, physical and cultural development of mankind
Arboriculture	Cultivation of trees and vegetables
Archaeology	The study of antiquities
Astrochemistry	The study of interstellar matter with a view to knowing the origin of universe
Astrology	The ancient art of predicting the course of human destinies with the help of indications deduced from the position and movement of the heavenly bodies
Astronautics	The science of space travel
Astronomy	The study of the heavenly bodies
Astrophysics	The branch of astronomy concerned with the physical nature of heavenly bodies
Autoecology	The study deals with the ecology of species
Bacteriology	The study of bacteria
Biochemistry	The study of chemical processes of living things
Bioclimatology	Studies the effects of climate upon living organisms
Biology	The study of living things
Biometry	The application of mathematics to the study of living things
Biomechanics	The study of the mechanical laws relating to the movement or structure of living organisms
Biometeorology	Studies the effects of atmospheric conditions on living organisms
Bionics	The study of functions, characteristics and phenomena observed in the living world and the application of this knowledge to the world of machines
Bionomics	The study of the relation of an organism to its environments
Bionomy	The science of the laws of life
Biophysics	The physics of vital processes (living things)
Botany	The study of plants
Ceramics	The art and technology of making objects from clay, etc. (pottery)
Chemistry	The study of elements and their laws of combination and behaviour
Chemotherapy	The treatment of disease by using chemical substances
Chronobiology	The study of the duration of life
Chronology	The science of arranging time in periods and ascertaining the dates and historical order of past events
Climatotherapy	The treatment of disease through suitable climatic environment, often, but not always, found in recognised health resorts. As climate is subject to seasonal variations, the required environment may have to be sought in different localities at different periods of the year
Conchology	The branch of zoology dealing with the shells of mollusks
Cosmogony	The science of the nature of heavenly bodies
Cosmography	The science that describes and maps the main features of the universe
Cryobiology	The science that deals with the study of organisms, especially warmblooded animals, at low temperature. The principal effect of cold on living tissues is

TABLE 2-continued

List of different kinds of sciences	
Name of Sciences	Description
	destruction of life or preservation of it at a reduced level of activity
Crystallography	The study of the structure, forms and properties of crystals
Cryogenics	The science dealing with the production, control and application of very low temperatures
Cryotherapy	Use of cold, but not freezing cold, as a form of treatment. Hypothermia may be deliberately induced during surgery, for instance, to decrease a patient's oxygen requirement
Cytochemistry	The branch of cytology dealing with the chemistry of cells
Cytogenetics	The branch of biology dealing with the study of heredity from the point of view of cytology and genetics
Cytology	The study of cells, especially their formation, structure and functions
Dactylography	The study of fingerprints for the purpose of identification
Dermatology	The study of skin and skin diseases
Ecology	The study of the relation of animals and plants to their surroundings, animate and inanimate
Econometrics	The application of mathematics in testing economic theories
Economics	The science dealing with the production, distribution and consumption of goods and services
Electronics	Studies the development, behaviour and applications of electronic devices and circuits
Electrostatics	It is a study of static electricity
Embryology	The study of development of embryos
Entomology	The study of insects
Epidemiology	The branch of medicine dealing with epidemic diseases
Epigraphy	The study of inscriptions
Ethnography	A branch of anthropology dealing with the scientific description of individual cultures
Ethnology	A branch of anthropology that deals with the origin, distribution and distinguishing characteristics of the races of mankind
Ethology	The study of animal behaviour
Eugenics	The study of the production of better offspring by the careful selection of parents
Fractography	A study of fractures in metal surfaces
Genealogy	The study of family origins and history. It includes the compilation of lists of ancestors and arranging them in pedigree charts
Genecology	The study of genetical composition of plant population in relation to their habitats
Genesiology	The science of generation
Genetics	The branch of biology dealing with the phenomena of heredity and the laws governing it
Geobiology	The biology of terrestrial life
Geobotany	The branch of botany dealing with all aspects of relations between plants and the earth's surface
Geochemistry	The study of the chemical composition of the earth's crust and the changes which take place within it
Geodesy	Methods of surveying the earth for making maps and correlating geological, gravitational and magnetic measurements. It is a branch of geo-physics
Geography	The development of science of the earth's surface, physical features, climate, population, etc
Geology	The science that deals with the physical history of the earth
Geomedicine	The branch of medicine dealing with the influence of climate and environmental conditions on health
Geomorphology	The study of the characteristics, origin and development of land forms
Geophysics	The physics of the earth
Gerontology	The study of old age, its phenomena, diseases, etc
Glaciology	The study of ice and the action of ice in all its forms, and therefore including now

TABLE 2-continued

List of different kinds of sciences	
Name of Sciences	Description
Gynaecology	A study of diseases of women's reproductive organs
Histology	The study of tissues
Horticulture	The cultivation of flowers, fruits, vegetables and ornamental plants
Hydrodynamics	The mathematical study of the forces, energy and pressure of liquid in motion
Hydrography	The science of water measurements of the earth with special reference to their use for navigation
Hydrology	The study of water with reference to its occurrence and properties in the hydrosphere and atmosphere
Hydrometallurgy	The process of extracting metals at ordinary temperature by bleaching ore with liquids
Hydrometeorology	The study of the occurrence, movement and changes in the state of water in the atmosphere
Hydrotherapy	The treatment of disease by the internal and external use of water
Hydroponics	The cultivation of plants by placing the roots in liquid nutrient solutions rather than in soil
Hydrostatics	The mathematical study of forces and pressures in liquids
Hygiene	The science of health and its preservation
Limnology	The study of lakes
Lithology	It deals with systematic description of rocks
Mammography	Radiography of the mammary glands
Metallography	The study of the crystalline structures of metals and alloys
Metallurgy	The process of extracting metals from their ores
Meteorology	The science of the atmosphere and its phenomena
Metrology	The scientific study of weights and measures
Microbiology	The study of minute living organisms, including bacteria, molds and pathogenic protozoa
Molecular biology	The study of the structure of the molecules which are of importance in biology
Morphology	The science of organic forms and structures
Mycology	The study of fungi and fungus diseases
Neurology	The study of the nervous system, its functions and its disorders
Neuropathology	The study of diseases of the nervous system
Nosology	The classification of diseases
Numerology	The study of numbers. The study of the date and year of one's birth and to determine the influence on one's future life
Odontology study of the teeth	The scientific
Optics	The study of nature and properties of light
Ornithology	The study of birds
Orthopedics	The science of prevention, diagnosis and treatment of diseases and abnormalities of musculoskeletal system
Osteology	The study of the bones
Osteopathy	A therapeutic system based upon detecting and correcting faulty structure
Otology	The study of the ear and its diseases
Otorhinolaryngology	Study of diseases of ear, nose and throat
Paleobotany	The study of fossil plants
Paleontology	The study of fossils
Pathology	The study of diseases
Pharyngology	The science of the pharynx and its diseases
Phenology	The study of periodicity phenomena of plants
Philology	The study of written records, their authenticity, etc
Phonetics	The study of speech sounds and the production, transmission, reception, etc
Photobiology	The branch of biology dealing with the effect of light on organisms
Phrenology	The study of the faculties and qualities of minds from the shape of the skull
Phthisiology	The scientific study of tuberculosis
Phycology	The study of algae
Physical Science	The study of natural laws and processes other than those peculiar to living matters, as in physics, chemistry and astronomy
Physics	The study of the properties of matter
Physiography	The science of physical geography
Physiology	The study of the functioning of the various organs of living beings

TABLE 2-continued

List of different kinds of sciences	
Name of Sciences	Description
Phytogeny	The science dealing with origin and growth of plants
Planetology	A study of the planets of the Solar System
Pomology	The science that deals with fruits and fruit growing
Psychology	The study of human and animal behaviour
Radio Astronomy	The study of heavenly bodies by the reception and analysis of the radio frequency electro-magnetic radiations which they emit or reflect
Radiobiology	The branch of biology which deals with the effects of radiations on living organisms
Radiology	The study of X-rays and radioactivity
Rheology	The study of the deformation and flow of matter
Seismology	The study of earthquakes and the phenomena associated with it
Selenology	The scientific study of moon, its nature, origin, movement, etc
Sericulture	The raising of silkworms for the production of raw silk
Sociology	The study of human society
Spectroscopy	The study of matter and energy by the use of spectroscope
Statistics	The collection and analysis of numerical data
Tectonics	Study of structural features of earth's crust
Teleology	The study of the evidences of design or purpose in nature
Telepathy	Communication between minds by some means other than sensory perception
Therapeutics	The science and art of healing
Topography	A special description of a part or region
Toxicology	The study of poisons
Virology	The study of viruses
Zoogeography	The study of the geological distributions of animals
Zoology	The study of animal life

[0168] All these identifies can be repeatedly done to confirm the last identification is correct, there is not contingency.

[0169] The operating method of the present invention can refer to FIG. 1, FIG. 2A to FIG. 2F, FIG. 10, FIG. 11A, FIG. 11B, FIG. 12A, FIG. 12B, FIG. 13, FIG. 14, and FIG. 3A to FIG. 3E of the drawings.

[0170] FIG. 4 can explain why the reason the method of identification of the present invention can get accurate result.

[0171] One skilled in the art will understand that the embodiment of the present invention as shown in the drawings and described above is exemplary only and not intended to be limiting.

[0172] It will thus be seen that the objects of the present invention have been fully and effectively accomplished. It embodiments have been shown and described for the purposes of illustrating the functional and structural principles of the present invention and is subject to change without departure from such principles. Therefore, this invention includes all modifications encompassed within the spirit and scope of the following claims.

1: An improved method to identify a victim of abuse and a remote operator using a device of voice to skull and remote neural monitoring, comprising the steps of:

selecting one item from a database (a) in a computer by a tested person which only causes the remote operator to have a disgusting psychological response but does not cause the tested person to have the disgusting psychological response, instructing the tested person to launch a first imaginary psychological attack, assigning a first set of test questions based on the first imaginary

psychological attack and obtaining a first set of answers from the tested person in response to the first set of test questions by an automatic system with a human machine interface communicating to a controller, and analyzing the first set of answers and assigning a true or false status to the first set of answers by a polygraph meter connecting to the controller;

selecting one item from a database (b) in the computer which only causes the remote operator to have a funny psychological response but does not cause the tested person to have the funny psychological response, instructing the tested person to launch a second imaginary psychological attack, assigning a second set of test questions based on the second imaginary psychological attack and obtaining a second set of answers from the tested person in response to the second set of test questions by the automatic system with the human machine interface communicating to the controller, and analyzing the second set of answers and assigning a true or false status to the second set of answers by the polygraph meter; and

using a database (c) in the computer consisting of a plurality of foreign clubs or organizations items, the tested person selecting one of the foreign clubs or organizations items which only causes the remote operator to have a foreign clubs or organizations psychological response but does not cause the tested person to have the foreign clubs or organizations psychological response, instructing the tested person to launch a third imaginary psychological attack, assigning a third set of test questions based on the third imaginary psychological attack and obtaining a third

set of answers from the tested person in response to the third set of test questions by the automatic system with the human machine interface communicating to the controller, and analyzing the third set of answers by the polygraph meter and assigning a true or false status to the third set of answers, where the foreign clubs or organizations psychological response is angry psychological response and strong deny.

2: The improved method to identify the victim of abuse and the remote operator using the device of voice to skull and remote neural monitoring according to claim 1, further comprising the steps of:

selecting one item from a database (c) in the computer which only causes the remote operator to have an anti-political trend and anti-religious belief psychological response and does not cause the tested person to have the anti-political trend and anti-religious belief psychological response, instructing the tested person to launch a fourth imaginary psychological attack, assigning a fourth set of test questions based on the fourth imaginary psychological attack and obtaining a fourth set of answers from the tested person in response to the fourth set of test questions, the and analyzing the fourth set of answers by the polygraph meter and assigning a true or false status to the fourth set of answers.

3: The improved method to identify the victim of abuse and the remote operator using the device of voice to skull and remote neural monitoring according to claim 1, further comprising the steps of:

using a database (d) in the computer consisting of a plurality of countries and races items, the tested person selecting one of the countries and races items which only causes the remote operator to have a countries and races psychological response and does not cause the tested person to have the countries and races psychological response, instructing the tested person to launch a fifth imaginary psychological attack, assigning a fifth set of test questions based on the fifth imaginary psychological attack and obtaining a fifth set of answers from the tested person in response to the fifth set of test questions, and analyzing the fifth set of answers by the polygraph meter and assigning a true or false status to the fifth set of answers.

4: The improved method to identify the victim of abuse and the remote operator using the device of voice to skull and remote neural monitoring according to claim 2, further comprising the steps of:

using a database (d) in the computer consisting of a plurality of countries and races items, the tested person selecting one of the countries and races items which only causes the remote operator to have a countries and races psychological response and does not cause the tested person to have the countries and races psychological response, instructing the tested person to launch a fifth imaginary psychological attack, assigning a fifth set of test questions based on the fifth imaginary psychological attack and obtaining a fifth set of answers from the tested person in response to the fifth set of test questions, and analyzing the fifth set of answers by the polygraph meter and assigning a true or false status to the fifth set of answers.

5: The improved method to identify the victim of abuse and the remote operator using the device of voice to skull and remote neural monitoring according to claim 1, further comprising the steps of:

using a database (f) in the computer consisting of a plurality of languages and dialects items, the tested person selecting one of the languages and dialects items which only causes the remote operator to have a languages and dialects psychological response and does not cause the tested person to have the languages and dialects psychological response, instructing the tested person to launch a sixth imaginary psychological attack, assigning a sixth set of test questions based on the sixth imaginary psychological attack and obtaining a sixth set of answers from the tested person in response to the sixth set of test questions, and analyzing the sixth set of answers by the polygraph meter and assigning a true or false status to the sixth set of answers.

6: The improved method to identify the victim of abuse and the remote operator using the device of voice to skull and remote neural monitoring according to claim 2, further comprising the steps of:

using a database (f) in the computer consisting of a plurality of languages and dialects items, the tested person selecting one of the languages and dialects items which only causes the remote operator to have a languages and dialects psychological response and does not cause the tested person to have the languages and dialects psychological response, instructing the tested person to launch a sixth imaginary psychological attack, assigning a sixth set of test questions based on the sixth imaginary psychological attack and obtaining a sixth set of answers from the tested person in response to the sixth set of test questions, and analyzing the sixth set of answers by the polygraph meter and assigning a true or false status to the sixth set of answers.

7: The improved method to identify the victim of abuse and the remote operator using the device of voice to skull and remote neural monitoring according to claim 3, further comprising the steps of:

using a database (f) in the computer consisting of a plurality of languages and dialects items, the tested person selecting one of the languages and dialects items which only causes the remote operator to have a languages and dialects psychological response and does not cause the tested person to have the languages and dialects psychological response, instructing the tested person to launch a sixth imaginary psychological attack, assigning a sixth set of test questions based on the sixth imaginary psychological attack and obtaining a sixth set of answers from the tested person in response to the sixth set of test questions, and analyzing the sixth set of answers by the polygraph meter and assigning a true or false status to the sixth set of answers.

8: The improved method to identify the victim of abuse and the remote operator using the device of voice to skull and remote neural monitoring according to claim 4, further comprising the steps of:

using a database (f) in the computer consisting of a plurality of languages and dialects items, the tested person selecting one of the languages and dialects items which only causes the remote operator to have a languages and dialects psychological response and does not cause the tested person to have the languages

and dialects psychological response, instructing the tested person to launch a sixth imaginary psychological attack, assigning a sixth set of test questions based on the sixth imaginary psychological attack and obtaining a sixth set of answers from the tested person in response to the sixth set of test questions, and analyzing the sixth set of answers by the polygraph meter and assigning a true or false status to the sixth set of answers.

9: The improved method to identify the victim of abuse and the remote operator using the device of voice to skull and remote neural monitoring according to claim 1, further comprising the steps of:

using a database (g) in the computer consisting of a plurality of scientific knowledge items, the tested person selecting one of the scientific knowledge items which only causes the remote operator to have a scientific knowledge response and does not cause the tested person to have the scientific knowledge response, instructing the tested person to launch a seventh imaginary psychological attack, assigning a seventh set of test questions based on the seventh imaginary psychological attack and obtaining a seventh set of answers from the tested person in response to the seventh set of test questions, then using polygraph meter to analysis the seventh set of answers and assigning a true or false status to the seventh set of answers.

10: The improved method to identify the victim of abuse and the remote operator using the voice to skull remote neural monitoring according to claim 2, further comprising the steps of:

using a database (g) in the computer consisting of a plurality of scientific knowledge items, the tested person selecting one of the scientific knowledge items which only causes the remote operator to have a scientific knowledge response and does not cause the tested person to have the scientific knowledge response, instructing the tested person to launch a seventh imaginary psychological attack, assigning a seventh set of test questions based on the seventh imaginary psychological attack and obtaining a seventh set of answers from the tested person in response to the seventh set of test questions, then using polygraph meter to analysis the seventh set of answers and assigning a true or false status to the seventh set of answers.

11: The improved method to identify the victim of abuse and the remote operator using the device of voice to skull and remote neural monitoring according to claim 3, further comprising the steps of:

using a database (g) in the computer consisting of a plurality of scientific knowledge items, the tested person selecting one of the scientific knowledge items which only causes the remote operator to have a scientific knowledge response and does not cause the tested person to have the scientific knowledge response, instructing the tested person to launch a seventh imaginary psychological attack, assigning a seventh set of test questions based on the seventh imaginary psychological attack and obtaining a seventh set of answers from the tested person in response to the seventh set of test questions, then using polygraph meter to analysis the seventh set of answers and assigning a true or false status to the seventh set of answers.

12: The improved method to identify the victim of abuse and the remote operator using the device of voice to skull and remote neural monitoring according to claim 4, further comprising the steps of:

using a database (g) in the computer consisting of a plurality of scientific knowledge items, the tested person selecting one of the scientific knowledge items which only causes the remote operator to have a scientific knowledge response and does not cause the tested person to have the scientific knowledge response, instructing the tested person to launch a seventh imaginary psychological attack, assigning a seventh set of test questions based on the seventh imaginary psychological attack and obtaining a seventh set of answers from the tested person in response to the seventh set of test questions, then using polygraph meter to analysis the seventh set of answers and assigning a true or false status to the seventh set of answers.

13: The improved method to identify the victim of abuse and the remote operator using the device of voice to skull and remote neural monitoring according to claim 5, further comprising the steps of:

using a database (g) in the computer consisting of a plurality of scientific knowledge items, the tested person selecting one of the scientific knowledge items which only causes the remote operator to have a scientific knowledge response and does not cause the tested person to have the scientific knowledge response, instructing the tested person to launch a seventh imaginary psychological attack, assigning a seventh set of test questions based on the seventh imaginary psychological attack and obtaining a seventh set of answers from the tested person in response to the seventh set of test questions, then using polygraph meter to analysis the seventh set of answers and assigning a true or false status to the seventh set of answers.

14: The improved method to identify the victim of abuse and the remote operator using the device of voice to skull and remote neural monitoring according to claim 6, further comprising the steps of:

using a database (g) in the computer consisting of a plurality of scientific knowledge items, the tested person selecting one of the scientific knowledge items which only causes the remote operator to have a scientific knowledge response and does not cause the tested person to have the scientific knowledge response, instructing the tested person to launch a seventh imaginary psychological attack, assigning a seventh set of test questions based on the seventh imaginary psychological attack and obtaining a seventh set of answers from the tested person in response to the seventh set of test questions, then using polygraph meter to analysis the seventh set of answers and assigning a true or false status to the seventh set of answers.

15-16. (canceled)

17: The improved method to identify the victim of abuse and the remote operator using the device of voice to skull and remote neural monitoring according to claim 8, further comprising the steps of:

using a database (g) in the computer consisting of a plurality of scientific knowledge items, the tested person selecting one of the scientific knowledge items which only causes the remote operator to have a scientific knowledge response and does not cause the

tested person to have the scientific knowledge response, instructing the tested person to launch a seventh imaginary psychological attack, assigning a seventh set of test questions based on the seventh imaginary psychological attack and obtaining a seventh set of answers from the tested person in response to the seventh set of test questions, then using polygraph meter to analysis the seventh set of answers and assigning a true or false status to the seventh set of answers.
18-20. (canceled)
